

NORDIC
WOODFIBRE

Nolco-FLEX

The Nordic way of packaging

We are a Danish manufacturer, based 50 km south of Copenhagen. Since 1988 we have specialized in the production of lamella packaging which protects against pressure, shock, impact, deformation, surface damage, and high stacking loads.

Our products consist of pressed woodfibre material and are available in widths up to 8 m, zig-zag folded on pallets. Our customers are companies in the cable, steel, aluminium, piping, and rods industries, as well as mechanical and electrical engineering companies.

Advantages

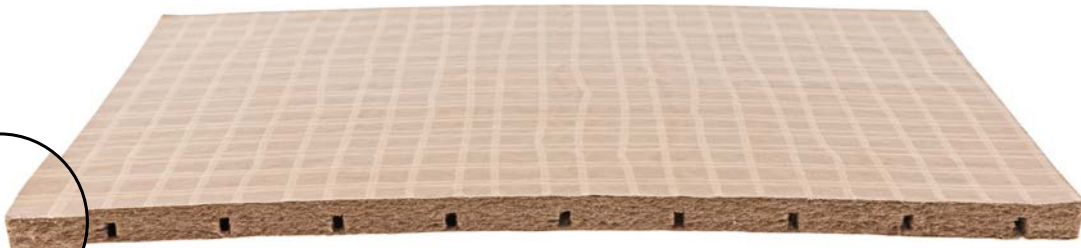

- Over 30 years of experience in lamella packaging
- Flexible and cut-to-size production
- Sales to more than 50 countries around the world
- Lean and effective processes

Nolco-FLEX

Protective casing for shock-, pressure-, surface- and weather-sensitive goods

Nolco-FLEX is made from soft woodfibre boards supplied in running lengths of 122 m which is possible because of the parallel grooves and double-sided lamination. It is manufactured in widths from 100 to 2,400 mm and offers great flexibility in the required length simply by cutting between the lamellas. Because of its elastic shaping properties, Nolco-FLEX is a proven product for protective packaging of goods in different shapes and sizes.

INFO:

With a material thickness of 10 mm, Nolco-FLEX offers significantly better protection of sensitive surfaces than comparable products.

Delivery forms:

- Lamella width: 30 mm
- Lamellas are only glued and the glue is heat-resistant
- Widths: 100 up to 2,400 mm
- Standard lengths: 122 m zig-zag folded or 61 m in rolls

Product Benefits

- Easy to use
- Easy to close with simple tools
- Fast and easy one-man handling
- Protection against impact, shock, vibration, and high stacking loads
- Prevents scratches on the packed product due to inside lamination with kraft paper
- Surface protection against climate, oil, water and UV radiation
- Mechanical shock absorber (forklift)
- Low weight: only 3 Kg/m²
- No nails, staples, splinters required – no risk of damage to the packed goods
- Environment friendly – Main components made of 100% woodfibre produced from wood residues

Saves ...

- ... 70 % working time (vs. wood) – you simply wrap it around your product and strap it!
- ... 40 % material vs. wood
- ... Less waste – because of cut-to-size widths
- ... storage – less space required

Application

- Cover or strapping underlayer
- Cables, wires and other coiled goods
